

Lecture 11: When disaster strikes

Hands-on Unix system administration DeCal

2012-04-02

Last lecture

❖ Last lecture

Disasters

Alleviating the pain

- next lecture: special topics
- then final projects and presentations!
- please see us if you have requests/needs for project or advice/help
- directions to connect to project group VM are in lab

❖ Last lecture

Disasters

❖ Software
meltdowns

❖ Hardware
meltdowns

❖ Criminals on
the loose

❖ Escalation of
problems

❖ 2003
Northeast
blackout

❖ 2003
Northeast
blackout

Alleviating the
pain

Disasters

Software meltdowns

❖ Last lecture

Disasters

❖ Software meltdowns

❖ Hardware meltdowns

❖ Criminals on the loose

❖ Escalation of problems

❖ 2003 Northeast blackout

❖ 2003 Northeast blackout

Alleviating the pain

- system load too damn high
- remote access (networking, firewall, SSH) broken, foobared, etc.

Hardware meltdowns

❖ Last lecture

Disasters

❖ Software meltdowns

❖ **Hardware meltdowns**

❖ Criminals on the loose

❖ Escalation of problems

❖ 2003 Northeast blackout

❖ 2003 Northeast blackout

Alleviating the pain

- failed hard drives
- failed fans, power supplies, CPU, RAM

Criminals on the loose

❖ Last lecture

Disasters

❖ Software
meltdowns

❖ Hardware
meltdowns

❖ **Criminals on
the loose**

❖ Escalation of
problems

❖ 2003
Northeast
blackout

❖ 2003
Northeast
blackout

Alleviating the
pain

- crackers will do Bad Things
- compromised accounts
- looks can be deceiving, uncertain what to trust

Escalation of problems

❖ Last lecture

Disasters

❖ Software
meltdowns

❖ Hardware
meltdowns

❖ Criminals on
the loose

❖ Escalation of
problems

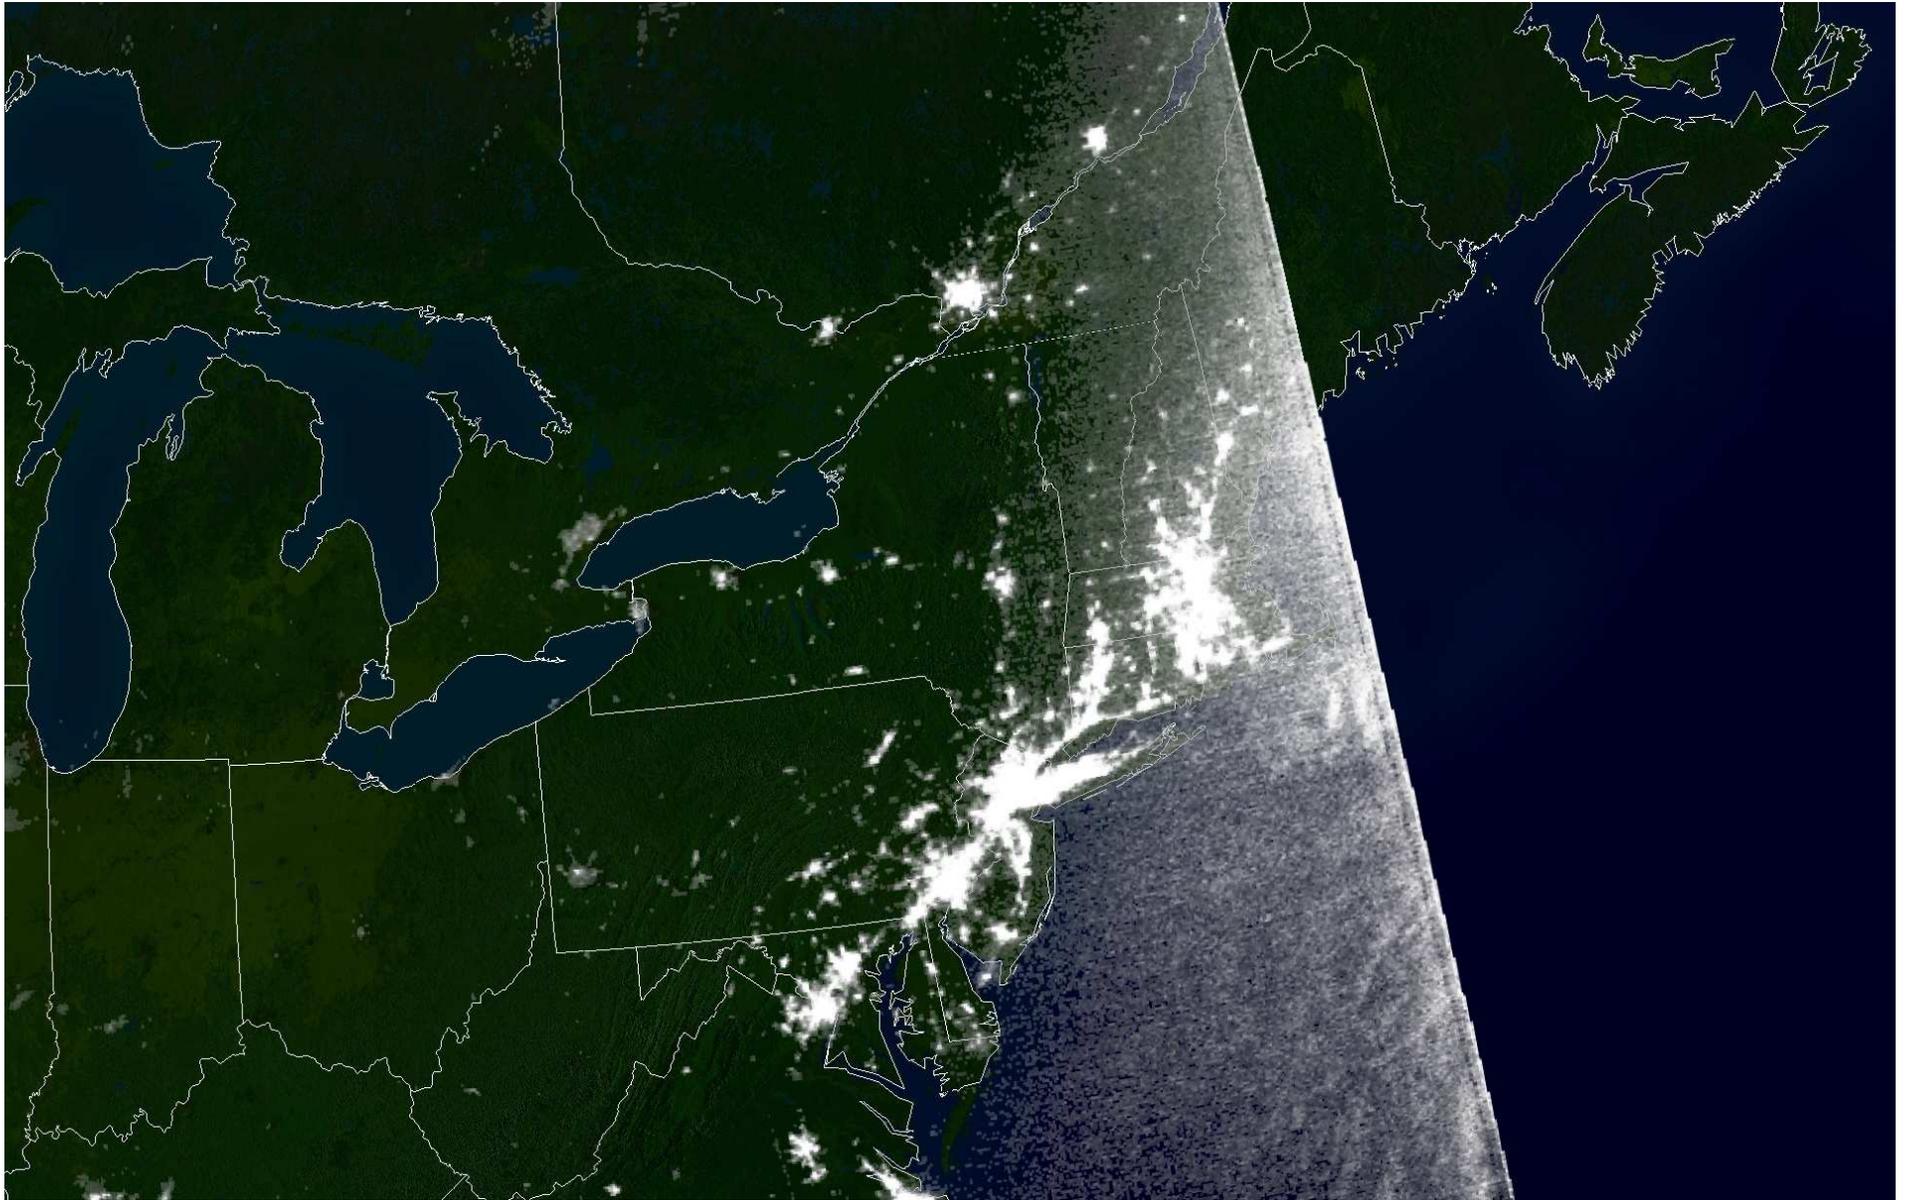

❖ 2003
Northeast
blackout

❖ 2003
Northeast
blackout

Alleviating the
pain

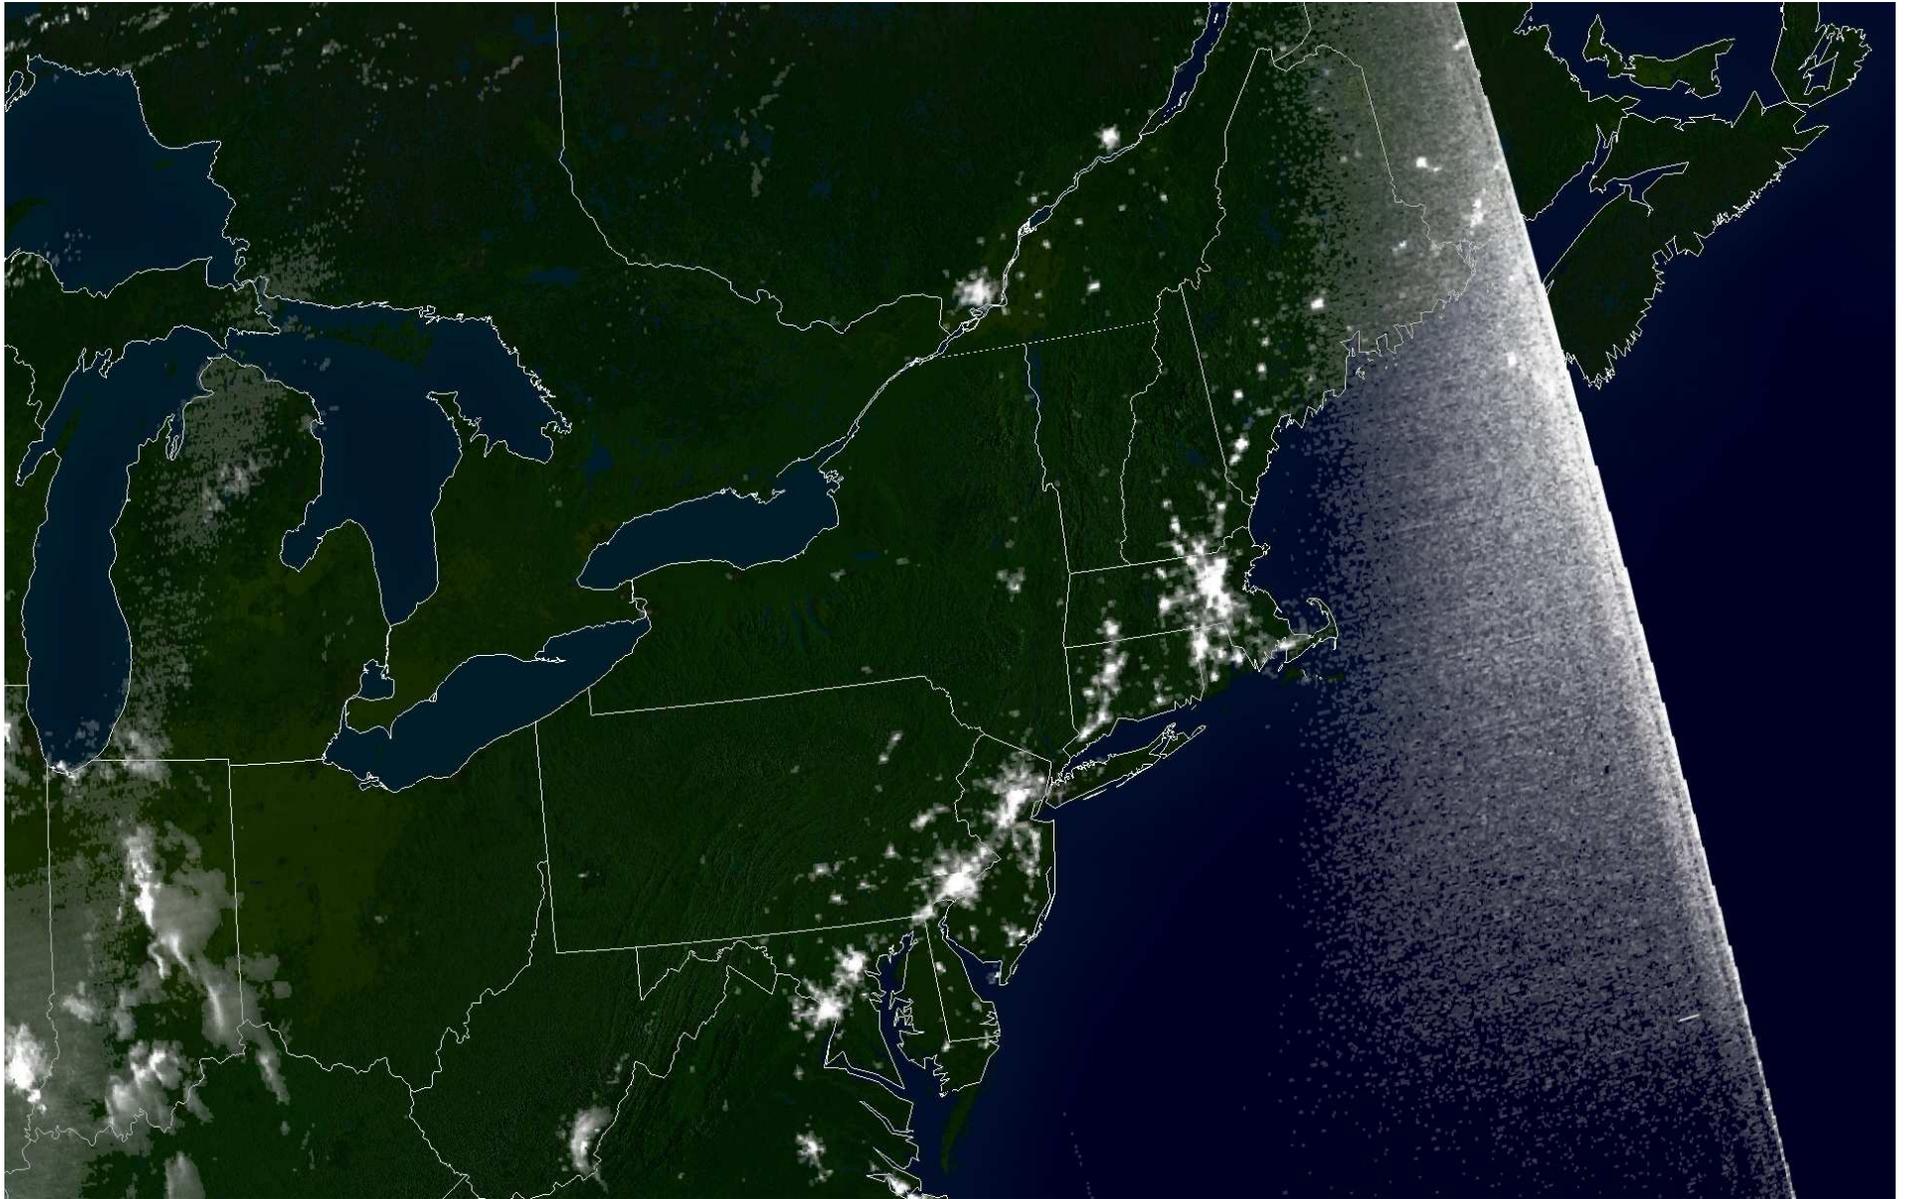

- we like to build systems on top of each other
- if one thing fails, it may break other things, causing other things to fail

2003 Northeast blackout

August 13, 2003, 9:21pm EDT

2003 Northeast blackout

August 14, 2003, 9:03pm EDT

❖ Last lecture

Disasters

Alleviating the pain

- ❖ Be Prepared
- ❖ Power management
- ❖ Out-of-band management
- ❖ Redundancy
- ❖ Monitoring
- ❖ Security
- ❖ Backups

Alleviating the pain

Be Prepared

❖ Last lecture

Disasters

Alleviating the pain

❖ **Be Prepared**

❖ Power management

❖ Out-of-band management

❖ Redundancy

❖ Monitoring

❖ Security

❖ Backups

- Boy Scout motto
- Murphy's Law: "Anything that can go wrong, will go wrong."
- s— happens

Power management

❖ Last lecture

Disasters

Alleviating the pain

❖ Be Prepared

❖ **Power management**

❖ Out-of-band management

❖ Redundancy

❖ Monitoring

❖ Security

❖ Backups

- Uninterruptible Power Supply (UPS)
- many UPSes can remotely power cycle servers

Out-of-band management

❖ Last lecture

Disasters

Alleviating the pain

❖ Be Prepared

❖ Power management

❖ **Out-of-band management**

❖ Redundancy

❖ Monitoring

❖ Security

❖ Backups

- separate hardware that can be remotely accessed
- independent from rest of hardware, dedicated NIC
- can access BIOS, power cycle, provide visual display
- e.g., IPMI, Dell DRAC, Sun LOM

Redundancy

❖ Last lecture

Disasters

Alleviating the pain

❖ Be Prepared

❖ Power management

❖ Out-of-band management

❖ **Redundancy**

❖ Monitoring

❖ Security

❖ Backups

- dual redundant power supplies typical
- RAID
- failover servers for high availability
- spare parts (hard drives!) for swapping

Monitoring

❖ Last lecture

Disasters

Alleviating the pain

❖ Be Prepared

❖ Power management

❖ Out-of-band management

❖ Redundancy

❖ **Monitoring**

❖ Security

❖ Backups

- many large scale operations (Google, Facebook) have many failed servers at any point in time, monitoring servers reroute traffic appropriately
- monitor syslog
- SNMP traps
- alarm notification by email, text message

Security

❖ Last lecture

Disasters

Alleviating the pain

❖ Be Prepared

❖ Power management

❖ Out-of-band management

❖ Redundancy

❖ Monitoring

❖ **Security**

❖ Backups

- subscribe to OS security announcements
- Intrusion Detection Software (e.g., snort, bro)
- be wary of lax permissions
- limit root access

Backups

❖ Last lecture

Disasters

Alleviating the pain

❖ Be Prepared

❖ Power management

❖ Out-of-band management

❖ Redundancy

❖ Monitoring

❖ Security

❖ Backups

- user data, system configuration
- ideally daily, weekly, monthly rotations
- RAID is not a backup
- e.g., rsync, cron, rsnapshot
